Dear eClean Technologies:

Over the last nine months we have had the privilege of using eClean Technologies' aqueous ozone janitorial cart and mobile pressure washer products. As we transitioned into our post-pandemic world, we searched for safer and cost-effective alternatives to chemical cleaners that would allow us to make a positive and healthier impact on the environment as well as our Members and staff. And, naturally, we also looked to save cleaning time and overall costs for our large property.

Before committing to your products, we conducted research on products in the market, and most of them only met some of our needs. After use of your products, we found your products met them all. Your janitorial cart with its water tank significantly decreases our locker and restroom cleaning times. By using your product we've eliminated the odors in our sauna and bathrooms. Your mobile cart is effective on all other areas of our Clubhouse and is a great alternative to clean our golf carts and cart area. With your products we're able to power wash clean the undercarriage and seating area and then with a simple tip change we turn around to disinfect the areas.

One of the best aspects of your products is that we no longer have significant down time as we did when we used chemicals that created waiting time, pungent odors, and irritations created on dissipation. With your units we just spray and go.

I can unequivocally say that your products exceeded our expectations. eClean's products are easy to use and highly effective for our cleaning needs. They are a natural all-in-one, all-purpose cleaner.

We strongly recommend your products.

Sincerely,

Craig Cliver
